Phase out Grasso GSL / GSM compressor overhauls and repairs

More than 25 years after Grasso stopped selling new Grasso compressors from the type GSL / GSM, we also have decided to phase out these types of compressors.

Service, overhaul and repairs

As of July 2019, we take these machines out of our Repair and Exchange program.

Service and repair activities workshop and field service will stop from that moment.

In case of malfunction or breakdown of your GSL / GSM machines in the field other solutions can be offered with other brands.

Spareparts

Concerning the spare parts of these machines, we will stop keeping parts on stock.

Only a small selection of hard runners (shaft seals, gaskets, filters, etc.) will be kept on stock as long as it takes.

Some parts can still be ordered on request, but due to the logistical chain it will have a delivery time of ca. 2-6 weeks. Returned spare parts of these machines will not be accepted.

Documentation and consult

We keep the project, compressor documentation of these compressors available till 2021 to support you by phone and mail as good as possible.

Capacity control actuator

Capacity control actuator, the "yellow" Elomatic actuator was already not available and it won't be now, we designed an alternative, contact us for the possibilities.

We strongly request you to inform your customers about this newsletter, so that they can prepare themselves and do a risk analyses on their own installation, before they experience this phase out during a malfunction or breakdown.

If you have any questions or remarks, please do not hesitate to contact us.
